

# LET'S TALK ENERGY

## Policy Actions Sheet

1.

I want to prioritise green jobs. We should support skills development, including training options for young people in the renewables industry.

2.

I want funds for our local community from renewables developers to help improve recreational facilities, restore disturbed habitats and support local community Net Zero initiatives.

3.

I want to support electrifying public transport, such as rail and buses, as well as more electric charging points to make it easier to charge all electric vehicles.

4.

I want government to improve the planning process for building renewables, so they can be approved and built quickly.

5.

I want to ensure that both new and old buildings are energy efficient and have low carbon heating. This applies to homes, schools, and other public buildings.

6.

I want government to support investment in renewable generation, to increase the amount of electricity produced by the wind, sun and green hydrogen.

7.

I want more green and safe alternatives to using a car or public transport for people in our communities, such as cycle routes.

8.

I want funds to support renewables innovation and new technology in industry. This will speed up the move towards low carbon energy, transport and buildings.
